## All-Cap Value & Large-Cap Value

### Second Quarter Commentary

July 2024

Stocks posted mixed results in the second quarter but were solid performers in the first half of the year. Our All-Cap Value (ACV) and Large-Cap Value (LCV) SMA composites lagged the benchmark Russell 3000® Value Index (R3000V) and Russell 1000® Value Index (R1000V), respectively, for the quarter and year to date but remain ahead on a gross basis over all the longer periods shown below. In the second quarter and year to date, our shortfall versus the R3000V and R1000V was attributable primarily to stock selection in the consumer staples and financial sectors.<sup>1</sup>

	For the periods ended June 30, 2024					
	Q2	YTD	1 Year	5 Year	10 Year	SI*
<b>EIC ACV SMA Gross</b>	-3.0%	4.9%	14.9%	12.5%	9.6%	11.7%
<b>EIC ACV SMA Net</b>	-3.7%	3.3%	11.5%	9.2%	6.4%	8.5%
<b>Russell 3000® Value Index</b>	-2.3%	6.2%	12.9%	8.9%	8.1%	10.3%
<b>S&amp;P 500® Index</b>	4.3%	15.3%	24.6%	15.0%	12.9%	11.2%
<b>EIC LCV SMA Gross</b>	-2.5%	5.2%	15.0%	12.7%	9.6%	9.5%
<b>EIC LCV SMA Net</b>	-3.3%	3.7%	11.6%	9.4%	6.4%	6.3%
<b>Russell 1000® Value Index</b>	-2.2%	6.6%	13.1%	9.0%	8.2%	7.2%
<b>S&amp;P 500® Index</b>	4.3%	15.3%	24.6%	15.0%	12.9%	8.3%

Table 1 Data Source: Morningstar Direct<sup>SM</sup>. \*Since Inception (SI): January 1, 1986 for ACV and January 1, 2001 for LCV. See footnote 2. Returns for periods greater than one year are annualized. Past performance does not guarantee future results.

### **Investment Environment**

After broad-based positive returns in the first quarter, growth significantly outpaced value in the second quarter and is now considerably ahead year to date.<sup>3</sup> This style dominance, however, has been driven by an extraordinary concentration of returns. The stocks of the six largest companies alone have accounted for 127% and 60% of the entire Russell 3000® Index's (R3000) gain during the quarter and year to date, respectively.<sup>4</sup> These six include the former "Magnificent 7" minus Tesla — Microsoft, NVIDIA, Apple, Alphabet, Amazon, and Meta Platforms.

We refer to these six companies as the "AI-6" since they are either creating artificial intelligence (AI) models, perceived to benefit from greater implementation of AI, or, in the case of NVIDIA, selling the chips that power AI models. The distant future may be bright for AI-related companies, but aside from NVIDIA, financial success has been elusive. Significant spending on AI initiatives has delivered little commensurate revenues, and some industry leaders are beginning to question the spending and whether it will ever generate sufficient returns.<sup>5</sup> High industry growth is no guarantee of high returns on invested capital. In the long run, fundamentals matter.

VALUE DISCIPLINE • QUALITY FOUNDATION • GROWTH OBJECTIVE

The market, however, is not pricing in skepticism. As the left chart below shows, the AI-6 are trading near valuation peaks seen during the COVID pandemic. Ten years ago, these stocks could be purchased for a collective valuation not too different from the overall market. Today, trading at 38.4x earnings, they are inarguably expensive.

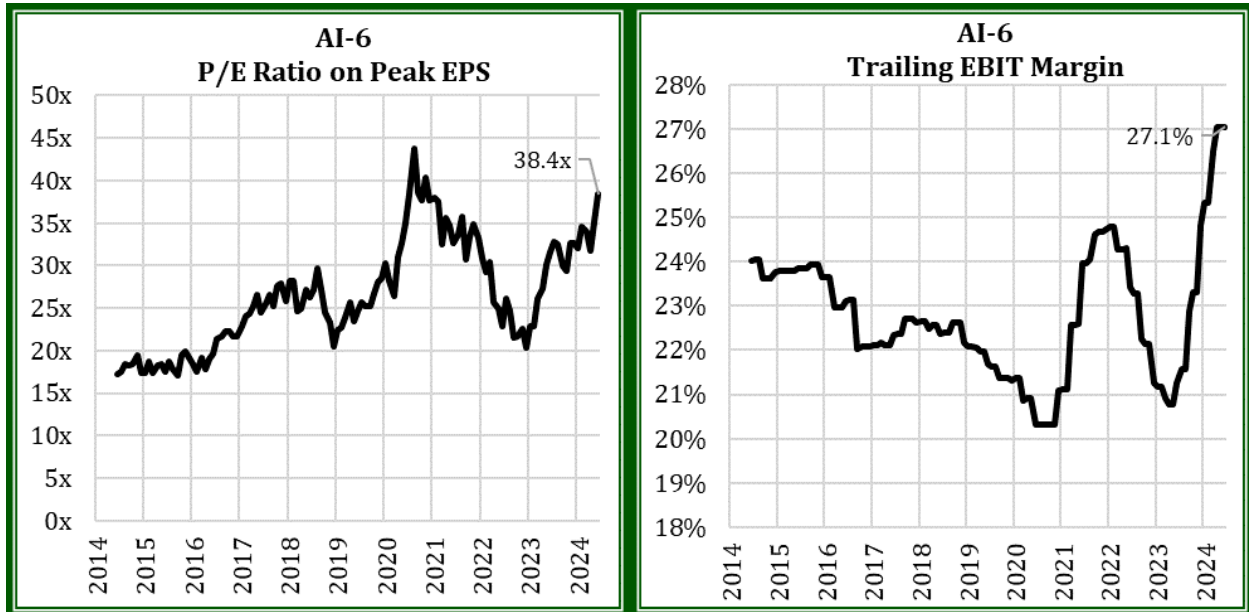

Chart 1 and Chart 2 Data Source: S&P Capital IQ<sup>PRO</sup>. See footnote 6. Charts are provided for illustrative purposes only.

Moreover, their valuations are based on peak margins, as shown in the right-hand chart above. Some of the margin increase is due to NVIDIA’s exploding profitability, which is directly tied to AI, but uncertain as to its sustainability. However, it is not an AI story for the rest of the group. Instead, a significant amount of profit growth and margin expansion is increasingly driven by accounting changes. Since 2019, Microsoft, Alphabet, Meta, and Amazon have extended the estimated useful lives of their servers and networking equipment from three years up to six years, reducing depreciation expense and boosting earnings by up to 20%, according to our analysis. Given the intensity of hardware usage with AI and rapid technological innovation summoning obsolescence, we doubt that useful lives are increasing.<sup>7</sup> With plans for continued significant near-term increases in capital expenditures around AI and the cloud, this low-quality, accounting-driven earnings boost is likely to escalate, even as free cash flow diverges lower.

The AI-6 now represent 27% of the R3000, while the ten largest companies represent 32.5% of the index, both all-time highs since 1980.<sup>8</sup> NVIDIA alone sports a larger market capitalization than the publicly traded market capitalization of France, England, or Germany and a larger market capitalization than five individual sectors in the R3000 — consumer staples, energy, materials, real estate, and utilities.<sup>9</sup> In essence, the market is betting that the economic value of AI, in NVIDIA alone, is worth more than the profit output of several large, developed countries and entire sectors in the U.S., the largest economy in the world.

As shown in the following chart, setting aside their recent post-COVID outperformance, the ten largest companies in the index have dramatically underperformed the rest of the market over the long run. We do not believe this time will be different, especially given that many of the top ten companies look very expensive and trade at valuations based on all-time high margins. Simply put, we think these stocks are priced for perfection, for a world where substantial benefits of AI accrue only to them. Accordingly, we do not own any of these companies.

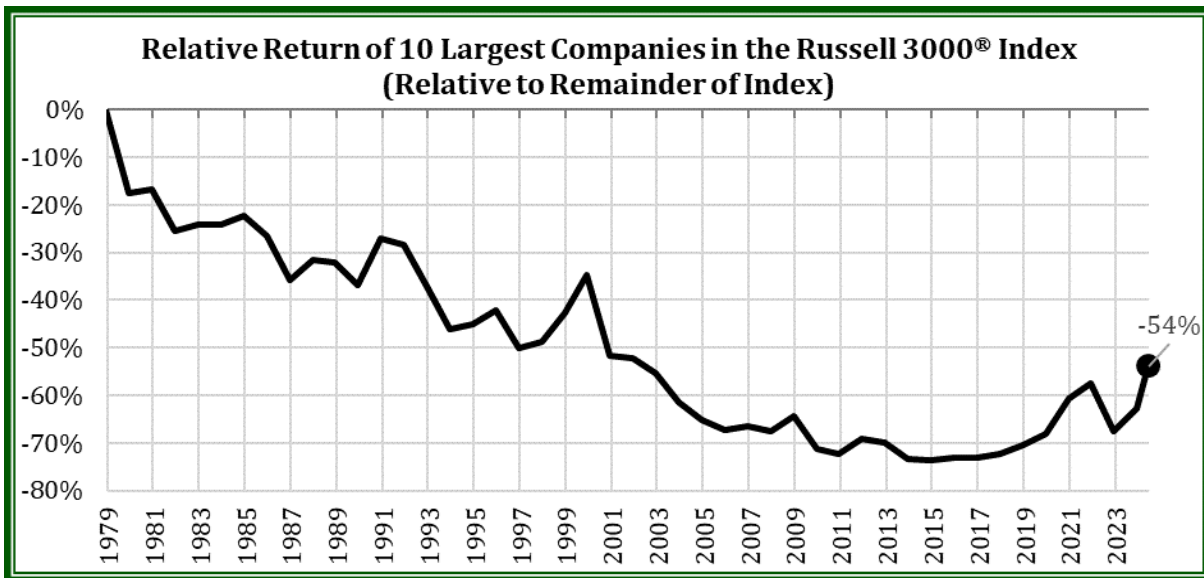

Chart 3 Data Source: S&P Capital IQ<sup>PRO</sup>. See footnote 10. Charts are provided for illustrative purposes only.

Turning to the broader market, as seen in the next chart, growth stocks overall look extremely expensive compared to their history, and the spread between growth and value index valuations is at a record high going back to 1990. Based on these observations of historical valuation, growth stocks are priced to deliver negative returns over the next decade, and value should outperform growth meaningfully.<sup>11</sup>

Chart 4 Data Source: S&P Capital IQ<sup>PRO</sup>. See footnote 12. Charts are provided for illustrative purposes only.

Our performance is often driven more by what is **not** in our portfolios than what is in them. Growth stocks are richly priced and have had a spectacular run, based largely on valuation expansion rather than significant fundamental superiority to value stocks.<sup>13</sup> Little attention is given to valuation, earnings quality, sustainability of growth, or returns on capital employed. In our opinion, growth stocks today are priced with little room for error. For that reason, our portfolios have low exposure to growth stocks and remain heavily tilted towards value stocks, which we believe continue to offer good odds of earning reasonable returns for investors.

## **Portfolio Review**<sup>14</sup>

We bought new positions in Patterson Companies for ACV and NNN REIT for LCV during the quarter. We also added to five existing positions on valuation due to stock price weakness: W.P. Carey, PPG Industries, Kenvue, PayPal Holdings, and Globe Life. Lastly, we trimmed four holdings based on valuation: General Dynamics, The Williams Companies, American Express, and Unilever.

We initiated a 1% position in Patterson Companies Inc. (PDCO) in ACV portfolios. Patterson distributes consumable products, equipment, and software to dental and veterinary customers in North America and the U.K. The company's full-service model offers products, services, and consulting, enabling dentists and vets to focus on medicine rather than running their practice. Approximately 60% of earnings are derived from dental operations, with the remaining 40% split between the companion animal (i.e., pets) and production animal businesses. Fundamental performance has been strong over the past few years due to post-pandemic increases in dental visits and pet adoptions. More recently, shares were down approximately 30% from their 52-week high on weakening demand for dental equipment and companion animal products. Despite these potential near-term headwinds, we are attracted to the defensible nature of Patterson's competitive position, as the company holds a sizable and stable share in mature, lower-growth, service-oriented end markets. The company has a \$2.1 billion market capitalization, a solid balance sheet, and a history of attractive capital returns. Shares are reasonably priced at approximately 10x our estimate of normalized earnings with a 4%+ dividend yield.

We purchased a 1.5% position in NNN REIT Inc. (NNN) in LCV portfolios. NNN is a mid-cap real estate investment trust that owns approximately 3,500 single-tenant retail properties in the United States. Most properties (~70%) are acquired through sale-leaseback transactions, and the remaining (~30%) are bought at auctions. Leases are normally triple-net — tenants are responsible for all property expenses, including utilities, taxes, insurance, and maintenance, which allows NNN to generate a more predictable cash flow. Occupancy is typically quite high (99% currently; minimum 96% in 2009) due to long leases (15–20 years at inception; 10-year remaining average term) and a propensity to sell vacant properties. As a result of this model, cash earnings have been reasonably stable even in more strained economic environments. NNN has a strong balance sheet, with a 12-year weighted average debt maturity and a BBB+ credit rating.<sup>15</sup> Shares trade at a 20% discount to their 10-year median valuation. It pays approximately 70% of its cash earnings as a dividend, currently a 5.3% yield, and has increased its dividend for 34 consecutive years.

Finally, a note on Globe Life (GL), formerly known as Torchmark. We have owned a position in the company for many years, attracted by its basic life and supplemental health insurance lines and a conservative investment portfolio. Shares fell precipitously in April when an anonymous short seller released a report alleging fraud, a toxic sales culture, and potential accounting/underwriting inaccuracies. When the short report first surfaced, we placed GL under review in order to vet the claims. Indeed, we view short selling as a healthy antidote to often pervasive bullishness, so we typically pay close attention to short sellers, though it is not often that we find one of our holdings in their crosshairs. While there were disappointing anecdotes relating to workplace culture and aggressive sales practices, our review did not identify any potential fraud or accounting inaccuracies that would materially alter our assessment of the business's earnings power or valuation. Instead, much of the original short report and other reports that have since built upon that work have been somewhat misleading, and we feel they display a misunderstanding of insurance accounting and regulations.

When GL released earnings in the quarter, the company corroborated our findings. Nevertheless, GL commissioned an independent law firm to review the short report for the benefit of shareholders, with

results expected soon. Moreover, the company increased its share buyback authorization, a vote of confidence in the business. With shares down nearly 35% on the year, we added modestly to our position, currently at 2%. Short interest, one marker of the veracity of the claims, remains low at under 3% of shares outstanding, though a handful of vocal short-focused firms are still active in the name. As a result of these events, the SEC has opened an inquiry, and we continue to monitor the situation closely.

We select stocks on a bottom-up basis, looking for quality characteristics and reasonable valuations. On a weighted average basis, our portfolios trade at approximately 15x trailing and 12x forward earnings, with a return on equity of roughly 15%, long-term earnings growth expectations of 8%, and a dividend yield of 3.3–3.5%, with a weighted average credit rating of A-.<sup>16</sup> As always, we seek to avoid the worst excesses offered in the market, be they valuation, capital structure, earnings quality, or other, and instead focus on areas with higher odds of earning reasonable returns. Our most meaningful overweights relative to the R3000V and R1000V continue to be in financials, followed by consumer staples, communication services, and energy, while our significant underweights are in industrials, information technology, and health care. We believe our portfolios are reasonably diversified and should perform well in a range of economic outcomes.

We thank you for your partnership with EIC.

\*\*Inception Date: January 1, 1986

**Disclosures:**

Equity Investment Corporation (EIC) is an SEC-registered, independent investment adviser incorporated in the state of Georgia. EIC has been providing investment advisory services to clients since 1986.

From January 1, 1986, through December 31, 1999, Jim Barksdale was primarily responsible for creating and achieving the performance results. Over that time period, the All-Cap Value SMA composite gained 14.4% (annualized) (11.1% net of an assumed maximum annual 3% fee), while the Russell 3000® Value Index rose 15.6% (annualized).

Andrew Bruner joined as the second member of EIC’s investment team in December 1999. From that point through the present day, portfolios have been managed using a team-based approach. Terry Irrgang became the third member of our investment team in April of 2003. Ian Zabor became the fourth member of our team, joining EIC in July of 2005. From January 1, 2000 through June 30, 2024, our investment team was responsible for the All-Cap Value SMA composite increasing by 10.2% (annualized) (7.0% net of an assumed maximum annual 3% fee); the Russell 3000 Value Index gained 7.3% (annualized).

Effective September 30, 2016, we implemented a succession plan to ensure the continuity and stability of our firm. In a transaction that closed on that date, a new investment adviser entity formed by Messrs. Bruner, Irrgang, and Zabor purchased substantially all of the assets and assumed all of the liabilities necessary for EIC’s continuous operation from Mr. Barksdale. That new registrant succeeded to all of EIC’s business. As planned, Mr. Barksdale’s tenure at EIC ended in August of 2019 when his transitional employment agreement expired. From the date of the succession through June 30, 2024, our investment team was responsible for the All-Cap Value SMA composite advancing by 11.3% (annualized) (8.1% net of an assumed maximum annual 3% fee), versus an 9.2% (annualized) increase for the Russell 3000 Value Index.

During all times after 1999, our investment team has been responsible for achieving the performance results shown in the tables.

Performance numbers (beginning July 1, 1995) are the value-weighted, time-weighted, total return composite results of fully discretionary All-Cap Value equity wrap fee (SMA) accounts. The strategy employs a flexible framework (not constrained by any cap size limitations) of investing in high-quality, well-managed companies, while at the same time avoiding those that look inexpensive relative to their historical record but are actually in structural decline. Prior to January 1, 2013, the composite was called the All-Cap Value Wrap Composite. Returns are generally presented net of foreign withholding taxes on dividends, interest income, and capital gains; however, returns for some accounts are presented gross of foreign taxes depending on the treatment by their custodian. Prior to July 1, 1995, the returns are that of the All-Cap Value composite. Results for the period January 1, 1989, through July 1, 1995, include both SMA and non-SMA accounts. During this period, SMA accounts represent on average 24% of the composite. Since July 1, 1995, SMA accounts comprise 100% of the composite. The composite creation date is July 1, 1995, and the inception date is January 1, 1986. All accounts included in the composite are managed according to similar investment guidelines. The benchmark index is the Russell 3000 Value Index (which excludes an advisory fee), and was chosen because it is representative of the composite’s investment style. The Russell 3000 Value Index measures the performance of the largest 3000 US companies in the value segment of the US equity universe. The Russell 3000 Value Index is based on the Russell 3000® Index, a market-capitalization weighted equity index representing approximately 98% of the investable US equity market.

### Table Notes:

<sup>1</sup> \*Gross returns, presented as supplemental information, are “pure” gross and do not reflect the deduction of any expenses, including trading costs, for SMA accounts. “Pure” gross returns from 10/1/02 through 12/31/06, reflect the deduction of trading costs but not any additional expenses. For the period 1/1/89 through 7/1/95, SMA accounts represent on average 24% of the composite assets. Prior to 7/1/95 and for the periods 10/1/02 through 12/31/06, the returns are that of EIC’s All-Cap Value composite. For all other periods, SMA accounts represent 100% of the composite assets. Net returns are calculated by reducing gross returns with an assumed maximum annual SMA fee of 3.0%, applied monthly.

<sup>2</sup> Dispersion is an asset-weighted standard deviation for the accounts in the composite for the entire year (or year-to-date) and is calculated using gross returns. “N/A” represents when dispersion is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year. For 1986 through 1995 dispersion represents EIC’s All-Cap Value composite, which contains both SMA and non-SMA accounts. For 1996 through 2005, dispersion represents EIC’s internally administered SMA accounts.

<sup>3</sup> Number of Portfolios/Composite Assets significantly decreased in 2016 due to transitioning of a major SMA program to a model based (UMA) program during Q416.

<sup>4</sup> “Total Assets” include our regulatory assets under management (“GIPS® Firm Assets”) and our advisory-only “UMA Assets”. EIC has no trading discretion for UMA accounts and provides a model portfolio to the program sponsor or overlay manager. The “UMA Assets” and “Total Assets” amounts are shown as supplemental information.

**Additional Notes:** The three year annualized standard deviation measures variability of the composite (gross of fees) and the benchmark returns over the preceding 36-month period.

## All-Cap Value SMA Composite Report

---

### **Disclosures (cont.):**

Performance has been measured on a monthly basis from January 1, 1986, to present. Periods are geometrically linked to obtain the quarterly and annual results. Eligible new accounts are added to the composite at the beginning of the first full quarter under EIC management. Trade-date accounting with monthly valuations and adjustments for large cash flows are used. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. The US Dollar is the currency used to express performance. Returns include the reinvestment of all income. Economic and market conditions have differed over the time period displayed, and likewise will be different in the future. Policies for valuing investments, calculating performance and preparing GIPS Composite Reports are available upon request.

EIC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. EIC has been independently verified for the periods January 1, 1986, through March 31, 2024. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to the composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. The verification reports, as well as a complete list and description of all the firm's composites, are available upon request by contacting Equity Investment Corporation, 1776 Peachtree Street NW, Suite 600S, Atlanta, GA 30309. The firm's list of broad distribution pooled funds is available upon request. Prospective clients should be aware that results are historical and do not imply future rates of return or volatility for EIC or the indices, which may be materially different from the past and from each other.

Investment management fees are based on market values of the assets under management. In addition to a management fee, some accounts pay an all-inclusive fee based on a percentage of assets under management. Other than brokerage commissions, this fee includes portfolio monitoring, consulting services, and in some cases, custodial services provided by a program sponsor. The assumed maximum fees for SMA accounts (charged quarterly) are 0.75%. Total fees charged may equal 3% per year (which is assumed to be equal to or higher than the highest actual SMA fee charged by a program sponsor). SMA schedules are provided by independent SMA sponsors and are available upon request from the individual sponsor. Further information about fees and compensation is discussed in EIC's form ADV Part 2 ([www.adviserinfo.sec.gov](http://www.adviserinfo.sec.gov)).

**Table Notes:**

<sup>1</sup> Gross returns, presented as supplemental information, are “pure” gross and do not reflect the deduction of any expenses, including trading costs, for SMA accounts. Net returns are calculated by reducing gross returns by an assumed maximum annual SMA fee of 3.0% (0.75%/quarter during 2001 and 0.25%/month thereafter).

\*\*Inception Date: January 1, 2001

**Disclosures:**

Equity Investment Corporation (EIC) is an SEC-registered, independent investment adviser incorporated in the state of Georgia. EIC has been providing investment advisory services to clients since 1986.

From January 1, 1986, through December 31, 1999, Jim Barksdale was primarily responsible for creating and achieving the performance results. Andrew Bruner joined as the second member of EIC’s investment team in December 1999. From that point through the present day, portfolios have been managed using a team-based approach. Terry Irrgang became the third member of our investment team in April of 2003. Ian Zabor became the fourth member of our team, joining EIC in July of 2005.

Effective September 30, 2016, we implemented a succession plan to ensure the continuity and stability of our firm. In a transaction that closed on that date, a new investment adviser entity formed by Messrs. Bruner, Irrgang, and Zabor purchased substantially all of the assets and assumed all of the liabilities necessary for EIC’s continuous operation from Mr. Barksdale. That new registrant succeeded to all of EIC’s business. As planned, Mr. Barksdale’s tenure at EIC ended in August of 2019 when his transitional employment agreement expired.

Our investment team has been responsible for achieving the performance results shown in the tables.

Performance numbers are the value-weighted, time-weighted, total return composite results of fully discretionary Large-Cap Value equity wrap fee (SMA) accounts managed in the style of the firm’s traditional value methodology with a large-cap bias. The strategy employs a flexible framework of investing in high-quality, well-managed companies, while at the same time avoiding those that look inexpensive relative to their historical record but are actually in structural decline. Prior to January 1, 2013, the composite was called the Large-Cap Value Wrap Composite. Returns are generally presented net of foreign withholding taxes on dividends, interest income, and capital gains; however, returns for some accounts are presented gross of foreign taxes depending on the treatment by their custodian. The composite creation and inception date is January 1, 2001, and SMA accounts comprise 100% of the composite. The benchmark index is the Russell 1000® Value Index (which excludes an advisory fee), and was chosen because it is representative of the composite’s investment style. The Russell 1000 Value Index measures the performance of the large-cap value segment of the US equity universe. It is a subset of the Russell 3000® Value Index and includes those Russell 1000® companies with lower price-to-book ratios and lower expected long-term mean earnings growth rates. The Russell 1000 represents approximately 90% of the investable US equity market.

Performance has been measured on a monthly basis from January 1, 2001, to present. Periods are geometrically linked to obtain the quarterly and annual results. Eligible new accounts are added to the composite at the beginning of the first full quarter under EIC management. Trade-date accounting with monthly valuations and adjustments for large cash flows are used. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. The US Dollar is the currency used to express performance. Returns include the reinvestment of all income. During 2002, 2% of the assets are non-fee paying accounts. There are no non-fee paying accounts during any other period. Economic and market conditions have differed over the time period displayed, and likewise will be different in the future. Policies for valuing investments, calculating performance and preparing GIPS Composite Reports are available upon request.
